Precision Prevention and Care in Chronic Kidney Disease

Message from the Guest Editors

Over ten percent of the world's population, or nearly 850 million people, suffer from chronic kidney disease (CKD). Many complex determinants contribute to it, and some of them may be appropriately avoided. Early CKD is usually asymptomatic, but could be detected by urinary screening. Care is the key to prolong disease progression in late CKD. However, appropriate CKD care depends on underlying diseases and complication controls. In the past decade, personalized data has been well produced and recorded. A wonderful time to assist in the development of care plans for different people who are at risk of or are suffering from CKD's threats is coming. In this Special Issue, I would like to sincerely invite you to contribute your relevant articles on optimizing CKD prevention and care.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
