Recent Advances in Precision Psychiatry

Message from the Guest Editors

In the 21st century, medicine has advanced to the era of precision medicine. The goals of precision medicine are to find the patient-specific etiology, understand the unique pathophysiology, and tailor treatment for every patient, Psychiatry is no exception. Every psychiatric patient is unique in the context of their biopsychosocial and spiritual perspectives. Precision medicine is most suitable and desirable in the field of psychiatry. The recent advances in genomics, functional genomics, pharmacogenomics, brain imaging, electrophysiology, stem cell biology, and genome editing, to name a few, have greatly facilitated advances in the etiological diagnosis, pathogenesis elucidation, treatment regimen optimization, and new therapy development of psychiatric disorders. This new frontier of precision psychiatry comes with many challenges, and it is also a daring adventure involving insightful and surprising discoveries. In this Special Issue, we will showcase some exciting and excellent research findings that move psychiatry to the area of precision psychiatry. We sincerely invite you to contribute your important research findings to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on "omics"-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical

subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2. Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
