

## Special Issue

# Precision Medicine in Urologic Oncology: Diagnosis, Treatment and Prognosis

### Message from the Guest Editor

Malignant tumors emerging from the urinary tract make up a significant part of all human neoplastic diseases, with prostate cancer being the second most commonly diagnosed malignancy among men worldwide. Because of their aggressive clinical course and substantial burden for both healthcare systems and for individual patients, every effort should be undertaken to develop more precise diagnostic methods and more effective therapeutic modalities. In this Special Issue of *JPM*, we present a series of high-quality original articles and meta-analyses concerning various urologic malignancies, illustrating the current developments in both diagnosis and treatment.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
