Personalized Care and Treatment Compliance in Chronic Conditions

Message from the Guest Editors

Chronic diseases such as diabetes, cancer, cardiovascular and neurodegenerative diseases are growing at an alarming rate, especially in the aging population. These patients have different disease statuses and management requirements, so providing personalized care is key.

We aim to publish articles describing a personalized care approach to the diagnosis and treatment to chronically ill patients.

Personalised care is a collaborative process that should be used in chronic condition management in which patients, caregivers and healthcare providers identify and discuss problems caused by or related to the patient's condition, and then develop plans and goals to empower patients.

Personalized care can improve aspects of physical health, mental health and the ability to self-manage conditions. Thus, a personalized care approach could greatly benefit patients with chronic conditions.

We encourage the submission of manuscripts that describe a personalized care approach to the diagnosis and treatment to chronically ill patients.
