Message from the Guest Editor

This Special Issue is an opportunity to research recent developments in Big Data-Driven Financial Management. The application of data analytics to business is a trending topic, especially when referring to financial accounting, managerial accounting, financial analyses (both ratios and flows), and management decision-making processes.

If properly managed Big Data can provide great support on forecasts, due diligence analyses, auditing, fraud examination and corporate governance, market analyses, decision-making processes in general, serving many areas of business management. When focused on financial management, Big Data can be mined from many financial sources, both endogenous and exogenous.

Thus, this Special Issue will publish research that explores Big Data-Driven Financial Management and its developments in recent years, framed in the context of impactful applications of the Big Data in finance, accounting, management, auditing, business information systems auditing, fraud examination, financial forecasts, artificial intelligence, machine learning, and economics.
