AI and Sustainable Growth in Economics and Finance: Global Trends and Challenges

Message from the Guest Editors

In the last 15 years, the world has been significantly affected by many unpleasant events (economic, financial and energy crises, the pandemic, etc.). These events have led to unpredictable economic upheavals and have significantly affected the competitiveness, sustainability and profitability of businesses, impeding economic growth, increasing the accumulation of private and public debt, and hindering social equality, prosperity and social cohesion.

In this context, the existence of strong and efficient money and capital markets and the contribution of financial institutions and stock exchanges to the financing of businesses and the stimulation of liquidity are undoubtedly of the utmost importance.

The main objective of this Special Issue is to promote research papers from the fields of economics, banking, finance, energy, corporate governance, engineering and sustainability. Articles may concern policies to address imbalances and distortions in economic and financial markets, the development of corresponding emerging methodologies, and the application of sophisticated econometric and other data analysis tools to model economic and financial markets.
