Special Issue

Financial Markets and Institutions and Financial Crises

Message from the Guest Editor

This Special Issue invites papers on all aspects of financial markets and institutions related to financial stability, risk management, financial regulation, and the potential causes of financial crises (banking and currency crises). The Special Issue intends to explore important topics relating to the working of financial systems and financial stability, as frequently discussed in academia and the policy arena, since the onset of the global financial crisis of 2007-2009. Papers on both macro- and microeconomic aspects of financial markets relevant to the discussion of financial market stability and financial regulation will be considered for publication. Topics related to the potential causes of financial crises and macroprudential policies needed to avert such crises are of special interest. The Special Issue intends to contribute to the financial regulation policymaking of the future, considering both current and historical experiences.
