# **Special Issue**

# **Economic Forecasting**

# Message from the Guest Editor

This Special Issue focuses on the broad topic of "Economic Forecasting" and includes research methods and techniques for the modelling of economic forecasts, uncertainties, and risks. It covers a wide range of research topics and areas. Empirical and theoretical articles dealing with issues such as the modelling and forecasting of managerial and financial risks, volatility in the financial markets, stock returns, capital flows, and work conditions are welcome. In addition, research topics in the field of macroeconomic forecasts also play an important role in this Special Issue. Novel scientific contributions focusing on the measurement of the future relationships among such variables as tax rates, household incomes, government spending, interest rates, and employment by applying macro-econometric modelling are encouraged. The role of economic forecasting has become increasingly important under conditions of high uncertainties and risks, for both empirical and theoretical reasons. Therefore, special attention in this Issue is paid to economic forecasting in extraordinary circumstances such as the pandemic and economic crisis.
