

## Special Issue

# Theoretical, Empirical, and Experimental Aspects of Market Microstructure

### Message from the Guest Editor

This Special Issue concerns various theoretical, empirical, and experimental aspects of market microstructure, covering a wide range of topics. Theoretical market microstructure studies mainly focus on information-based models. In contrast to the model of efficient markets, market microstructure is concerned with how various frictions and departures from symmetric information affect trading processes. Market structure and design issues are important in this context. Empirical market microstructure research in actual markets depends on access to high-frequency data. Today, intraday data availability allows for empirical investigation of a wide range of issues in financial markets. Submissions related to price formation and price discovery, liquidity, dimensions of market liquidity, intraday patterns in various stock market characteristics, frictions in trading processes, and applications to other areas of finance will be given priority. Moreover, experimental studies in an artificial market are welcome, as they offer a very promising way to test theoretical predictions regarding market design.

## About the Journal

### Message from the Editor-in-Chief

Researchers are most welcome to contribute original research articles or comprehensive review papers for consideration and publication in *Journal of Risk and Financial Management (JRFM)*, an on-line, open access journal. *JRFM* adheres to rigorous peer-review as well as editorial processes, and publishes high quality manuscripts that address theoretical, practical and empirical issues in analysing real life financial data. The goal of *JRFM* is to enable rapid dissemination of high impact research to the scientific community.
