Message from the Guest Editor

Globally, COVID-19 facilitated a move towards remote working practices by many organisations and catalysed the use of tools and technologies for remote working by employees. Socio-political conflicts in many areas of the world have led to mass migration, refugee movement and cross-country transit on an unprecedented scale, raising questions around the loss of regional cultural knowledge, knowledge mobility and skill requirements. Environmental concerns (particularly in relation to energy sources and the management of habitats) are more pressing than ever, and KM must play a role in mitigating these issues. From a technological perspective, recent developments in the field of artificial intelligence allow us to consider how we validate knowledge and the significance of knowledge sources.

In this Special Issue of *Knowledge*, original research articles and reviews are welcome that focus on the future of knowledge management.
