Special Issue

Creating and Sharing Knowledge on Digital Platforms in Education

Message from the Guest Editor

Rapid technological developments and the COVID-19 pandemic have resulted in the extensive digitization of many human activities. These technological developments have also led to the widespread dissemination and use of digital education and training platforms to create, share, and transform knowledge. These digital platforms may adopt or choose a different logic and may be addressed to different educational levels (primary, secondary, and tertiary) or different audiences in different educational contexts (formal, non-formal, and informal education). As a result, many different methods exist for creating and sharing knowledge. This Special Issue focuses on digital education platforms and attempts to answer a multitude of questions, starting with their design and architecture, and continuing with issues of utilization, the benefits of their use along with critical considerations, and their future structure to highlight the essential learning and training of learners and the possible transformation of educational practices. We would like to welcome you to contribute a high-quality paper to this Special Issue. The deadline for full manuscript submission is 25 November 2023.
