### Message from the Guest Editors

In this Special Issue, we broaden that scope to include a deep historical perspective highlighting the role of past human activities in the formation of modern ecosystems. We encourage the submission of papers that have a deep temporal perspective, with a focus on the persistence of human landscape modification and how the signal of ancient land use can be detected in the modern environment.

We invite papers on a wide range of topics including, but not restricted to, landscape archaeology, historical ecology, niche construction theory, archaeobotany and palaeoecology, remote sensing, responses to climate change and land use models.
