submissions:

closed (30 June 2021)

Message from the Guest Editor

Dear Colleagues,

The roles of insects in sustaining ecosystems through their ecosystem services and in supporting food webs are increasingly recognized. Recent growth in the recognition of the importance of pollinators is but one example of this. However, meeting the growing need for agricultural intensification to feed a growing population puts this biodiversity at risk. This Special Issue of *Land* will bring together leading research on insect biodiversity in agricultural landscapes to highlight the importance of biodiversity and how it may be preserved. Studies included will focus on landscape influences on insect functional diversity or ecosystem services. Research on landscape strategies for preserving insect biodiversity is also welcome. Studies should focus on a broad range of taxa or diversity within a taxonomic group. The spatial focus will vary between different taxonomic groups but should consider landscape to regional levels for the taxa under study.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Nature and Landscape Conservation)
