Message from the Guest Editors

Dear Colleagues,

Natural hazards are physical phenomena that occur worldwide and contribute to the evolution of the Earth's landscape. Their associated consequences can lead to damage to both the natural and man-made environment. On a global scale, overpopulation and urban development in areas prone to natural hazards increase the impact of natural disasters.

In order to minimize the loss of human life and reduce the economic consequences, proper planning, and management of natural disasters are essential. However, consideration of the natural hazards and their influence on landscape evolution during the land use planning stage is essential in natural hazard mitigation and urban disaster management.

This Special Issue invites papers dealing with the interactions of natural hazards, human activities and land uses. Papers that address Natural Hazard Assessment Mapping and Land Uses are welcome.

Dr. George D. Bathrellos

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q1 (Nature and Landscape Conservation)
