closed (25 May 2023)

Message from the Guest Editors

Nowadays, there is a general recognition of the environmental damage caused by the use and control of rivers and their catchments. Restoration and conservation science have moved from ecological to wider human benefit goals (i.e., socio-ecological considerations) and, in turn, from a paradigm based on a static reference to processes based on dynamic variables and their trajectory.

This Special Issue aims to address the question of how we can consider the nature of fluvial processes as a means of sustaining human wellbeing. In other words, what can we learn from wild rivers in terms of restoration and conservation? Here, we consider a wild river as a river system that is unmodified or slightly modified and therefore in near natural condition, where our cultural environmental is often inseparable from the natural riverscape (especially in western countries). In short, our objective is to examine our natural fluvial heritage in different ways in order to raise awareness and educate. We believe that restoration and conservation projects need to be driven by data in order to close the gap between ecological need and social urgency.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank: JCR - Q2 (*Environmental Studies*) / CiteScore - Q2 (*Nature and Landscape Conservation*)
