Using the Climate Smart Communities Approach to Achieve Resilient Communities and Landscapes

Message from the Guest Editors

Climate-smart communities, as defined by the National Wildlife Federation (2016), are communities that are equipped to meet new challenges presented by climate change, such as extreme weather events, including heat waves, drought, water shortages, flooding, sea level rise. economic losses, and more. Climate-smart communities use nature-based and adaptive approaches to prepare for the impacts of climate change in ways that support people, wildlife, and habitats. For example, integrated landscape management in agriculture aims to support food production, ecosystem conservation, and rural livelihood across entire landscapes. Climate-smart agricultural landscapes, on the other hand, operate on the aforementioned principles but also integrate adaptation and mitigation into management objectives. Integration is key in climate-smart concepts, encompassing the integration of complex systems such as natural and social systems and the interaction between these two complex systems. Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
