

## Special Issue

# Eco-Sensitive Areas: Ecosystem Services, Protected Lands, and Current Challenges (Third Edition)

### Message from the Guest Editors

There are many eco-sensitive areas around the world, covering a sizeable portion of the world's terrestrial surface. Examples include mountain regions and transitional zones. However, due to excessive human land use activities and climate change, these regions are currently facing numerous challenges that affect the structure, quality, and ability of these ecosystems to provide services and products. In response to these challenges, many policies have been implemented, including designating protected land areas and providing ecological compensation, in order to balance the relationship between ecological protection and socio-economic development. These interventions must be supported by the government at different levels to ensure that these ecosystems are able to sustainably provide their services. Because of this, studies related to ecosystem services should play an essential role in managing and conserving eco-sensitive areas and protected land. However, it is still unclear how studies on ecosystem services can support the conservation of biodiversity under present conditions and in future scenarios.

## About the Journal

### Message from the Editor-in-Chief

*Land* is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
