

Special Issue

Vegetation Spatial Dynamics and Plant Diversity Trends of Natural and Urban Landscapes

Message from the Guest Editors

Understanding the dynamics of vegetation and plant diversity trends is crucial amidst rapid urbanization and environmental change. As environments are modified and fragmented due to several drivers (e.g., urban expansion, climate change, invasive alien species), it is fundamental to comprehend how flora, vegetation and habitats respond to preserve environmental quality. In the context of global environmental changes, it is significant to analyze these fluctuations in their current state and across different spatial and temporal scales. Detecting changes and understanding the dynamics of vegetation cover is a major research challenge for contemporary societies. Improving knowledge about changes in vegetation cover in the landscape will allow territorial managers and political authorities to identify more rational and appropriate management methods. The goal of this Special Issue is to collect papers (original research articles and review papers) to give insights into vegetation science, land use change and plant diversity analysis of specific case studies that cover different territories and spatial and temporal scales.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
