Special Issue

The Land-Energy-Water-Climate Nexus and Sustainable Development Challenges

Message from the Guest Editors

In the contemporary world, the mutual dependency between water, land, and energy is more obvious with the enhanced global climate and resource pressure. In particular, the potential climate crisis threatens food and energy safety with lower resource utilization efficiency, and we need to explore the potential sustainable development challenges and find an effective path to reduce developmental risk. Hence, Land is publishing a Special Issue, entitled "The Land-Energy-Water-Climate Nexus and Sustainable Development Challenges". We are pleased to announce that the Special Issue is open to submissions. It aims to publish high-quality, rigorously peer-reviewed, cutting-edge original research applying a multidisciplinary academic approach to topics relating to the land-energy-waterclimate nexus and sustainable development challenges. We look forward to receiving your original research articles and reviews.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
