Urban Ecosystem Services II: Toward a Sustainable Future

Message from the Guest Editors

Urbanization, growth population and climate change have negative impacts on ecosystem services (ES) in cities. Assessing as well as estimating the losses of ES due to rapid urban expansion plays a significant role in sustainable urban development. However, studies on the effects of urbanization on ES have shown inconsistent and, in some cases, contradictory results. Modern compact cities have been identified as having a high-density and mixed-use pattern. Their features are believed to contribute to a form of functional urban design that supports sustainability and restresses the importance of ES. The urban green space plays a vital role in the design and impact on how compact cities have developed, and thus, a scientific discord on the amount of greenery individuals require and to what extent contemporary approaches address this has been triggered. Therefore, future cities should integrate social-ecological systems into urban planning, management, and governance. Topics related to compact city design and land use planning are welcome. This Si aims to explore innovative approaches for enhancing urban sustainability and ES in the face of increasing urbanization concerns.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
