Special Issue

New Prospects of Soil Health and Conservation Tillage for Agricultural Land

Message from the Guest Editors

In this Special Issue, we aim to collect papers (original research articles and reviews) that describe the latest findings and new prospects from comprehensive research focused on soil health. At the same time, knowledge and experiences from different soil conservation techniques will be appreciated.

This Special Issue will welcome manuscripts that address the following themes:

- organic and mineral fertilization, in relation to soil;
- physical, chemical, and biological properties of soils;
- cycling of substances (water) and nutrients (N, P, K, Ca, Mg);
- soil organic matter (SOM), humus substances (HS), carbon sequestration, etc.;
- soil infiltration and water retention, soil moisture, etc.;
- watter runoff, soil loss etc.;
- conservation tillage (no-till, strip-till, cover cropping, etc.;
- appropriate agrotechnical measures, etc.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
