

# Special Issue

## Recent Progress in Land Cadastre

### Message from the Guest Editors

The aim of this Special Issue is to gather together articles (original scientific articles and review articles) containing insights into the creation, improvement and expansion of cadastral systems. Research articles on the use and quality of cadastral data in other areas of life are also welcome. A strong regional and scalar diversity of articles is also desirable. In this Special Issue, we are interested in articles based on empirical research, conceptual/theoretical work and review articles containing insights into the following topics: - Analyses of cadastral development, including comparative analyses; - The difficulties and limitations of building cadastral systems; - The use of cadastral data for various purposes; - Links between the quality of cadastral data and the development of other areas of life; - Multidimensional cadastral models. We look forward to receiving your original research articles and reviews.

## About the Journal

### Message from the Editor-in-Chief

*Land* is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.
