Special Issue

Rethinking Rural-Urban Interactions in Terms of Food Security and Agriculture Development

Message from the Guest Editors

Rural-urban interactions, as a complex economic and social phenomenon, involves various dimensions such as population mobility, resource allocation, and industrial integration. These interactions play a significant role in promoting coordinated rural-urban development, advancing agricultural transformation, ensuring food security, and fostering environmental protection and sustainable development. Research on the relationship between rural-urban interactions and food security, as well as sustainable agricultural development, can offer new theoretical frameworks and explanatory models for fields such as regional economics and agriculture development. This, in turn, enriches the academic discourse on rural-urban integration and development studies. This Special Issue seeks to collect original research papers as well as review papers to provide the state of the art of theoretical and empirical insights into the relationship between rural-urban interactions and sustainable agriculture development.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
