

Special Issue

Climate Change Impacts on Land Systems in the Caribbean

Message from the Guest Editors

Changes in climate patterns are impacting food production, livelihoods, biodiversity, justice, and a range of other social and ecological processes in the Caribbean. Climate change will continue to impact these landscapes, in both social and ecological dimensions, at multiple scales throughout the region. The region's diversity, as well as the associated diversity in the impacts of climate change, holds the potential to offer strategies that could enhance responses to climate change. Despite the relatively small geographic extent and economic reach of the Caribbean, the impact of climate change is significant.

This Special Issue seeks to bring together a multi-disciplinary presentation of the myriad of social and ecological impacts of climate change in the Caribbean. It will highlight the range of impacts of climate change within the region, bringing into contrast the internal diversity alongside regional commonalities. Including, but not limited to, the following:

Land use processes;
Changes in biodiversity;
Vulnerability and resilience;
Mitigation and adaptation strategies;
Climate justice;
Intersection of climate justice, risk, and policy.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Department Sustainable Landscape Development, Institute for Geosciences and Geography, University of Halle, Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
