

Special Issue

Soil Legacies, Land Use Change and Forest and Grassland Restoration

Message from the Guest Editors

Across the globe, human alteration of natural communities has affected soil chemical and physical properties, as well as plant the community structure and composition in dramatic ways. This Special Issue is designed to highlight current research focused on forest and grassland restoration, soil legacies created by prior human activities, and the effects of land use change on soil properties. As human activities continue to apply stress to our natural systems, it is vital for the research community to understand how we have changed soil and plant communities over time and to put forth the best techniques for improving ecosystem health across the world. The goal of this Special Issue is to collect papers (original research articles and review papers) to present insights about the current research focused on forest and grassland restoration, soil legacies due to human activities, and soil and plant communities affected by land use changes. This Special Issue will welcome manuscripts with the following themes:

- Forest and grassland restoration;
- Soil legacies and land use change.

We look forward to receiving your original research articles and reviews.

Guest Editors

Prof. Dr. Ken Smith

Prof. Dr. Deborah A. McGrath

Prof. Dr. Kuok Ho Daniel Tang

Prof. Dr. Kevin Emmanuel Scriber, II

Deadline for manuscript submissions

30 November 2025

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
