Special Issue

Landscape Ecology and Wildlife Conservation

Message from the Guest Editors

Road infrastructures can act as significant barriers to animal movement and limit ecological connectivity, and thus is very important to understand the landscape features and environmental factors that influence demographic connectedness. However, landscape modelling should be applied to inform cost-effective connectivity management and encourage evidencebased conservation, primarily through the proactive involvement of relevant stakeholders. Such an approach will benefit the attainment of biodiversity conservation and other environmental objectives while also allowing for economic development. Another emerging issue is the human-wildlife conflict, which is centered around the interaction between wildlife and humans, the coexistence of which is strongly linked and essential to sustainable development activities. Wildlife conservation requires proper landscape planning based on the results of implementing modern techniques (including genetics), finding the best solutions for mitigating human-wildlife conflicts and implementing measurable and tangible management approaches.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Department Sustainable Landscape Development, Institute for Geosciences and Geography, University of Halle, Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
