

Special Issue

Sustainable Development of the Territory and Use of Natural and Cultural Resources to Improve the Quality of Life of Residents

Message from the Guest Editors

In the current context, natural and cultural resources have become a factor in the development of territories. For this reason, the use of natural and cultural resources by human beings aimed at satisfying their subsistence needs (food, health, economic and leisure) have become a tool for the development of the community that lives in enclaves where those resources are located. This development will allow for improvements in the quality of life of its residents (social, economic and cultural well-being) which benefits their health and safety. In this sense, respect for natural resources, their enhancement, the environmental management of the territories, cooperation and commitment are key to their use by human beings.

The scope of this Special Issue is broad and manuscripts that present conceptual and/or empirical works from all areas of knowledge on the sustainable use of the natural and cultural resources of territories for improvements in the quality of life of the residents are welcome. We welcome both original research articles that offer interesting empirical insights and novel theoretical contributions, as well as review articles.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief
