Special Issue

Resilient Communities and Sustainable Development in Deltas

Message from the Guest Editors

Delta regions play a decisive role in global demographic and socio-economic development. However, the management of land use in delta regions is not at all easy. The highly conflicting interests and demands on land use in such areas require appropriate and wellfunctioning mechanisms of cooperation and multi-level governance as well as sound and effective urban and regional planning, including nature protection and urban design. Moreover, public participation is crucial to enhance risk awareness among the population, and to foster community engagement in processes of sustainability transformation. In this context, this Special Issue looks into the actual state of delta regions worldwide. We aim to discuss future challenges and to provide good practice examples of how to enhance resilience and guarantee more sustainable development. More explicitly, in this Special Issue, we want to discuss the following questions: (1) How can communities in delta regions become more resilient? (2) How can this contribute to make delta regions more sustainable? We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst
