Amazonia's Socioecological Complexity: A Microcosm of the Challenges and Opportunities in Reconciling Development and Conservation

Message from the Guest Editors

Amazonia harbors some of the world's most biodiverse ecosystems and is home to over 30 million people in nine countries and diverse local conditions, urban and rural. A region of continental proportions, Amazonia is better characterized as a mosaic of sociocultural and environmental realities and interconnected local and global economies. As such, the Amazon is the stage where diverse worldviews, demands, initiatives, and narratives regarding conservation and development intersect, impacting socioecological systems from local to global scales.

As a microcosm of the complex and rapid changes of the Anthropocene, Amazonia offers a window of opportunity for understanding the challenges and potential pathways in tackling the critical socioenvironmental demands of our times. In this Special Issue, we aim to collect research studies that frame and analyze the rich, complex, and dynamic interactions unfolding in Amazonia's socioecological systems from diverse angles and with theoretical and methodological research traditions.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
