

Special Issue

Agroforestry Systems for Biodiversity and Landscape Conservation

Message from the Guest Editors

Agroforestry systems are recognized as being of fundamental importance for the wide range of ecosystem services they are able to provide to rural communities all over the world. One of the most important roles of Agroforestry Systems is linked to the creation and preservation of different habitats and microhabitats, as the result of the continuous application of traditional human practices, representing refuge areas, nesting areas, food reservoirs, or ecological networks for different species. In addition, these systems have often contributed to the creation of unique cultural landscapes. The aim of the Special Issue is to collect papers dealing with biodiversity and landscape assessments, conservation and planning, in areas characterized by the presence of Agroforestry Systems, in particular in those areas affected by the abandonment of traditional practices.

- Biodiversity assessment and conservation;
- Landscape planning and/or monitoring;
- Landscape analyses through GIS software with innovative methodologies;
- Land use/cover changes mapping;
- Landscape perception;
- Experiences of public participation for territorial management and planning.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
