Green Landscape Planning and Design: A Multi-Disciplinary and Multi-Scale Approach for the Sustainable Development of Human Society

Message from the Guest Editors

Green landscapes provide a wide range of ecosystem services, from the supply of food and raw materials, to the regulation of physical and biological cycles, to the provision of aesthetic and cultural values, to the provision of recreation and tourism possibilities. The planning and design of green landscapes affects many different aspects of human life and social organization. For this reason, it is increasingly necessary to go beyond sectoral approaches and build an integrated vision and a multi-disciplinary and multi-scale approach, bringing together points of view and competencies from different fields. We invite academics and researchers to submit both original research and review papers focusing on, but not limited to, the following topics:

- landscape planning at the regional and/or local level, both in rural and urban contexts;
- urban green areas' planning and design;

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief
