

## Special Issue

# Hydrological Processes in Urban Environments

### Message from the Guest Editors

Present and future challenges posed by climate change and the growth of the number of people living in urban areas lead to the need to find new ways to manage the development of cities, in order to mitigate not only floods, but also threats such as water supply security, pollution, etc. This Special Issue has two objectives: improving the knowledge of hydrological processes in urbanized areas and contributing to the development of new methods, strategies and technologies for the management of urban waters. Urban catchments are characterized by a flashier nature of the hydrological response compared to natural catchments. In addition, the heterogeneity of land uses and underground characteristics influences the processes in the water cycle. Smart cities using water in smart ways will influence the water cycle as well. Moreover, water quality issues also have crucial importance. Nature-based solutions are applied to remove pollutants. All of these interactions between water processes and the various elements of urban catchments constitute many research directions, which deserve to be studied in a more in-depth manner.

## About the Journal

### Message from the Editor-in-Chief

*Land* is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant Impact Factor, and has a goal to become the best journal in land in the coming years.

### Editor-in-Chief

Prof. Dr. Christine Fürst  
Department Sustainable Landscape Development, Institute for  
Geosciences and Geography, University of Halle, Halle, Germany

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SSCI (Web of Science), GEOBASE, PubAg, AGRIS, GeoRef, RePEc, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
