

Special Issue

Promoting Anti-Racism in Land System Science and Social Ecological Systems

Message from the Guest Editor

This Special Issue seeks to assess anti-racist and decolonial strategies in the field of land system science by exploring how racial prejudices and systemic injustices impact areas such as land use management, landscape planning and environmental regulations. We welcome submissions that examine frameworks and methodologies that critically propose reforms for inclusive practices and provide insights on how land system science can actively contribute to combating racism both theoretically and practically. We are particularly interested in articles that achieve the following:

- Investigate the influence of race and historical colonial legacies on shaping land utilization, management practices and environmental policies.
- Examine the effects of racism on communities concerning land use choices and environmental equity.
- Suggest structures or methodologies to integrate anti-racist strategies into research and practices related to land systems.
- Detail instances where anti-racist and decolonial methods have been put into practice in land system studies and their resulting impacts.

We look forward to receiving your original research articles and reviews.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief
