

Special Issue

Tillage and Traffic Systems for Improved Productivity and Agricultural Sustainability

Message from the Guest Editors

Today's agriculture faces several challenges. While it plays a critical role in terms of food safety, the pressure on sustainability of yields, together with the importance of climate change mitigation, increases. Moreover, the economics of crop production is strongly affected by production factors, as well as local climates, and external production factors. The aim of this Special Issue is to provide an overview of the recent research on tillage and traffic systems, which improve productivity and agricultural sustainability. These topics fit into the scope of *Land* as they reflect the land–water as well as land–climate interactions and land management area. We welcome original research papers, review papers, and short communications on themes connected to conservation tillage technologies (no tillage, reduced tillage, and strategic tillage), precision tillage, soil compaction management, controlled traffic farming systems, etc. Submissions should discuss the effects of these systems on soil properties, crop responses, the economics of their implementation, the overall profitability of these systems, and their effect on the environment.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
