Special Issue

The Role of Water Management: Feedback between Water and Land Degradation

Message from the Guest Editors

Water management is a major factor that controls the organization and functioning of most ecosystems, especially those where water requirements and availability can drive land degradation and desertification. Knowing how climate, geomorphology, soil, or vegetation regulate the provision of hydrological services and maintain the ecosystems is very important because it improves decision-making and helps avoid land damage and, in some cases, to restore it. [......] This Special Issue explores the role of water management in the silvopastoral ecosystems where misuse of water can lead to soil degradation. Studies focusing on the relation between water and land degradation are welcome, particularly those that propose strategies to manage water and land. Scan the QR code to explore more...

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
