

Special Issue

Archaeological Landscape and Settlement II

Message from the Guest Editors

During the last few decades, problems regarding the exploitation of the highland zones have been analysed in better detail by many archaeologists worldwide. People have started to interpret mountain chains not exclusively as natural barriers, but also like territories which were systematically exploited and crossed during prehistory and history, not only when the ice melted and passes became accessible to move throughout different landscapes, but also for settling in different periods of the year, for different reasons. The goal of this Special Issue is to collect papers (original research articles and review papers) which provide insights about the exploitation of the world's highland zones.

- When did people start to move across mountains and why?
- Why do some mountains hide indelible iconographic traces of people's beliefs, settling and living?
- How can we interpret traces of transhumance and pastoralism, the somewhat ephemeral traces of the way shepherds built their seasonal camps made of tents or stone-walled and wooden dwellings?
- How can we improve the level of our research in the highland zones in the world?

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
