Special Issue

Anthropogenic Biomes

Message from the Guest Editors

The concept of anthropogenic biomes (anthromes) was introduced by Ellis and Ramankutty in their 2008 paper, "Putting People in the Map: Anthropogenic Biomes of the World," which mapped globally significant ecological patterns created by sustained direct interactions with humans. This work has inspired a wide variety of efforts to include humans in analyses of Earth's ecology, including efforts to define the Anthropocene as an epoch of geologic time. The goal of this special issue is to both consolidate existing work on anthromes and to advance

the utility of anthromes as a tool for understanding, mapping, assessing and guiding sustained human environment interactions in an increasingly anthropogenic biosphere.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
