Special Issue

Conservation of Bio- and Geo-Diversity and Landscape Changes

Message from the Guest Editors

Biodiversity is a key concept governing development policies towards assuming environmental responsibility through measures dealing with its conservation, needed to ensure that the future development is made in a way that does not affect it. Many scientists equate bio-, geoand eco-diversity with the ecological infrastructure. As part of the "global changes" land cover and use changes are a major threat to biodiversity. The Special Issue deals with the relation of the two, and with the factors able to affect it, drivers and possibilities to control it. We welcome pure and applied research. comparative studies, and reviews. Examples of possible topics include the impact of the land cover and use changes on bio-, geo-, and eco-diversity, and also on the natural protected areas, in reference to the drivers and means of controlling or mitigating it; spatial planning tools that can be used for preventing the land cover and use changes within and around the natural protected areas at different spatial scales; the human influence on the relationship between natural hazards and bio-, geo-, and eco-diversity; and the local development challenges in natural protected areas.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
