Special Issue

Designing Biodiversity-Friendly Landscapes

Message from the Guest Editor

Landscapes worldwide are affected by shifting economic, social, and political factors that alter their land uses, land covers, and spatial ecologies. This Special Issue invites research articles and perspectives on proactive conservation efforts in landscapes utilized for farming, forestry, or settlements, and also for those meant strictly for nature conservation. Given ongoing biophysical changes due to climate change and biotic homogenization, it is likely that many such landscapes will have novel characteristics in the future, with species composition and ecosystem functions.

The biological diversity that may be considered for this Special Issue may include wild species of special interest, the utilized and domesticated species involved in the particular land-use system(s), or entire assemblages of species found interacting in the landscape. Many management tools at the landscape scale include conservation corridors, protected riparian zones or wetlands, and restoration ecology. Their implementation may involve management for endangered species, rewilding, prescribed burns, attention to wild crop relatives, or other activities now characterizing proactive approaches.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
