Special Issue

The Politics of Natural Resources in the Era of Climate Change and Populism

Message from the Guest Editors

Over the past two decades, there has been an increasing convergence of multiple global crises around food, energy, environment, climate change, and finance. Contemporary land grabs are a capitalist response to the convergence of crises in which corporations seek to acquire control of more natural resources. The politics of natural resources, i.e., "who gets which natural resources, how, how much, why, for what purposes and with what implications?" have been transformed. We are interested in contributions dealing with the changing character of the politics of natural resources—land. water, forests, and minerals-examined in the context of converging issues of global resource rush, climate change, and populism. We would like to receive contributions with a special emphasis on the rise of agro-extractivism, land grabbing, climate change mitigation and adaptation and on the various forms of political reactions by different social classes and groups towards dynamic changes in the political economy of natural resources. Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
