

## Special Issue

# Land Degradation and Its Conservation Measures for Sustainable Development

### Message from the Guest Editors

The Special Issue aims to understand the major land degradation issues affecting terrestrial productivity and increasing CO<sub>2</sub> emission under rising regional and/or global temperature. It includes possible measures that have been used to manage the impact of degradation on the rehabilitation of the land, the consequences of degradation with respect to the improvement in the productivity of the land, and the increase in the land's carbon sink potential. Land management measures would help to understand specifically how carbon sinks are changing and what should be done to strengthen carbon sinks. This knowledge will help us achieve nature-based solutions to the Sustainable Development Goals. All these activities will also help us to enhance biodiversity and ecosystem-related services.

Land has published articles related to land use, land degradation, land rehabilitation, soil health, soil reclamation, biodiversity, and sustainable development of land through various management practices. Thus, the present topic of this Special Issue is related to issues of land degradation and its rehabilitation, which fit well with the themes of the journal.

## About the Journal

### Message from the Editor-in-Chief

*Land* is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant Impact Factor, and has a goal to become the best journal in land in the coming years.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SSCI (Web of Science), GEOBASE, PubAg, AGRIS, GeoRef, RePEc, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
