

Special Issue

Impact of Sustainable Forest Management on Biomass Growth and Carbon Accumulation Capacity

Message from the Guest Editors

Forests provide a wealth of goods and services that are indispensable for human wellbeing. Storage of a quarter of a trillion tons of carbon, reduction of carbon dioxide (CO₂) concentrations in the atmosphere, regulation of water and climate services, and maintenance of biodiversity are major ecosystem services provided by the forests. Protection and sustainable management of forest are the only proven carbon-capture and storage techniques that are natural, safe, and affordable and can be deployed at a large scale globally. The international community to consider sustainable forest management (SFM) as one of the most effective strategies in addressing the imminent 'bio-climate catastrophe'. Therefore, this Special Issue focuses on the contribution of forestry practices and activities under the umbrella of SFM approaches to mitigate the bio-climate catastrophe through enhanced forest growth and consequently increased carbon stocks within the forests.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
