

Special Issue

Global Vegetation and Land Surface Dynamics in a Changing Climate

Message from the Guest Editors

Land announces a Special Issue dedicated to studies from diverse perspectives, including observed, empirical, and process-based modeling approaches. Research papers are expected to examine vegetation trends and identify the critical scales, mechanisms, and feedbacks driving vegetation and land surface dynamics in a changing climate. The Special Issue will emphasize emerging trends, vegetation responses to ecosystem change, and outstanding uncertainties to direct future data collection efforts and model development. High-quality contributions covering the topic areas listed below:

- Remotely sensed indicators (derived from multi-scale satellite data and/or UAV) for elucidating vegetation dynamics in natural or managed landscapes
- Methods using modeling tools (using dynamic ecosystem models, Earth System Models, global climate models, etc.) to understand ecosystem dynamics and responses to climate forcings and global environmental change
- Interactions between human and natural ecosystems in a changing climate
- Regionally-focused assessments of ecosystem functionality, “health” (e.g., resilience), and their teleconnections and remote effects

Guest Editors

Dr. Pinki Mondal

Department of Geography, University of Delaware, Newark, DE 19716, USA

Dr. Sonali Shukla McDermid

Department of Environmental Studies, New York University, New York, NY 10003, USA

Deadline for manuscript submissions

closed (30 November 2019)

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant Impact Factor, and has a goal to become the best journal in land in the coming years.

Editor-in-Chief

Prof. Dr. Christine Fürst
Department Sustainable Landscape Development, Institute for
Geosciences and Geography, University of Halle, Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), GEOBASE, PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
