Special Issue

Feature Papers for Land, Biodiversity, and Human Wellbeing Section

Message from the Guest Editors

Land-change dynamics affect biodiversity and, in turn, human wellbeing at both societal and individual scales. Land-change dynamics are typically driven by short-term economic imperatives that rarely acknowledge their implications for biodiversity and/or human wellbeing. These implications are often somewhat removed from actual land-change dynamics or are otherwise unquantified. Human wellbeing, broadly defined, remains tenuously understood in relation to ongoing biodiversity losses driven by land change. This Special Issue welcomes submissions that highlight the nexus of land change, biodiversity, and wellbeing with respect to its trends, compromises, and controversies. All article types are welcome, from full empirical studies to short research notes to commentaries and reviews.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
