# **Special Issue**

# **New Directions in Land Reform**

# Message from the Guest Editors

Land reform formerly referred mainly to breaking up large land holdings by collectivisation into state farms (and sometimes later decollectivisation), and attempts to redress inequalities in land ownership continue, making land reform still unfinished business. Population growth, changing attitudes to ecology and environmental concerns, and climate change pressures are affecting land reform initiatives, especially in many low-income countries, changing social relationships within and between communities, and between communities and the state. Land reform requires reform of the legal regulatory framework for that both the ownership and use of land, which are highly political issues often involving intense debate and conflict. The Special Issue invites submissions from relevant disciplines or across multiple disciplines. Potential

topics include:
Land law reform
Titling of land ownership/use,
Land consolidation and readjustment,
Women's access to land,
Role of religious and communal institutions,
Eviction and alternatives,
Climate impacts, refugees and displaced people
Environmental and ecological aspects of land reform.

# Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
