

Special Issue

Landscape Connectivity: A Comprehensive View from Different Perspectives

Message from the Guest Editors

The ecological functioning of the landscape, which generates the services on which the welfare of society is based, depends on the spatial connections between different sites in the landscape. The flows and the consequences of their changes can be studied from different points of view and geographical scales, depending on the services involved, so the study of landscape connectivity must be approached from complementary perspectives. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not necessarily limited to) the following: landscape functional connectivity, connectivity in nature conservation networks, connectivity in species conservation, and connectivity in new landscapes resulting from climate change mitigation or minimization new uses and urban development. We also seek integrative studies for sustainable and innovative responses to reverse negative ecological effects of ecological connectivity loss, as a result of land use changes and changes in environmental factors.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
