

Special Issue

Undiscovered Landscapes, Analysis of Their Tourist Exploitation, and Proposal of Best Practices for Sustainability

Message from the Guest Editors

There is a wide range of literature on the main tourist destinations, their impact, the positive and negative effects, their development possibilities, and many other related aspects. However, there are still many destinations to be discovered from a tourism perspective in which good models or successful tourism practices can be applied to ensure their sustainable development or, based on past experience in similar destinations, to propose what should not be done to ensure the continuity and success of the destination. With this aim in mind, this Special Issue aims to explore this innovative theme in the field of landscape and tourism toward providing added value that can serve as a reference point for the exploitation of potential tourist destinations. It is, therefore, a call for review works: works of quantitative and qualitative content on destinations not yet exploited or overexploited for tourism, in which successful models or new ideas are provided for their correct exploitation at different levels.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant Impact Factor, and has a goal to become the best journal in land in the coming years.

Editor-in-Chief

Prof. Dr. Christine Fürst
