

Special Issue

Multifunctional Agroecosystems in Mediterranean Landscapes

Message from the Guest Editors

The agroecosystems forming part of the Mediterranean region, including small-scale terraced fields, agroforestry systems, and high-nature-value farmland, but also more conventional arable and perennial crop production systems, can be considered as social-ecological systems that provide multiple ecological functions and contribute to the region's biodiversity. These social-ecological systems are impacted by drivers acting from global (e.g., climate change) to local scales (e.g., urbanisation, abandonment or intensification of agricultural practices), leading to a reduction in ecosystem service capacities at regional scales. However, studies that assess the multifunctionality of agroecosystems remain limited, creating challenges to understand and predict the impacts arising from the complex suite of drivers acting on Mediterranean landscapes. This Special Issue focuses on the assessment of agroecosystem services and associated benefits, identification of trade-offs and synergies arising from the management of agroecosystems, and the assessment of the impact of local and landscape factors on agroecosystems and co-benefits to biodiversity and people.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend *Land* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Prof. Dr. Christine Fürst

Institute for Geosciences and Geography, Department Sustainable Landscape Development, University of Halle, Von-Seckendorff-Platz 4, 06120 Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
