Special Issue

Peatland Restoration – towards an Integrated Approach

Message from the Guest Editor

This Special Issue addresses current issues in peatland research in relation to site degradation history and contemporary restoration opportunities and practice. Driven by emerging policies in terms of climate change, climate change mitigation and landscape resilience. there are major initiatives to restore and reinstate functioning peatland systems such as mires and fens. The histories of peatland exploitation are less understood and yet they underpin any understanding of the contemporary condition of these often degraded landscapes and help inform restoration trajectories. The topic is embedded in wider discussions of soil, carbon, biodiversity, and climate. In terms of policy and practice, restoration and recovery must be supported by viable social and economic systems in order to deliver new sustainable landscapes.

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant impact factor, and has a goal to become the best journal in land in the coming years. I strongly recommend Land for your best research publications for a fast dissemination of your research.
