

Special Issue

Territory Spatial Planning toward High-Quality Development in China

Message from the Guest Editors

China officially launched the unified spatial planning system—territory spatial planning in 2019, defining objectives, framework, requirements, procedures, and its role in national development. The new spatial planning system integrates the main functional zoning, land use planning, urban–rural planning, and eco-environmental planning into a unified planning system, including master planning, detailed planning and specialized planning, with the aim of alleviating the contradiction in the process of designing, implementing, and supervising spatial plans. At present, the territory spatial planning is playing an increasingly important role in China’s high-quality development. The purpose of this Special Issue is to provide up-to-date knowledge in territory spatial planning and high-quality development in China. It aims to advance and share current insights in the theory, methodology, and application of territory spatial planning toward high-quality development in land use, economic growth, environmental management, etc.

About the Journal

Message from the Editor-in-Chief

Land is the only open access journal covering all aspects of land science, and it is a pioneering platform for publishing on land system science. Our editorial board is comprised of eminent scholars. We publish high quality research on societally relevant, emerging and innovative topics and results in land system research. It is now one of the top land journals with a significant Impact Factor, and has a goal to become the best journal in land in the coming years.

Editor-in-Chief

Prof. Dr. Christine Fürst
Department Sustainable Landscape Development, Institute for
Geosciences and Geography, University of Halle, Halle, Germany

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SSCI (Web of Science), GEOBASE, PubAg, AGRIS, GeoRef, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Nature and Landscape Conservation)
